OVERALL STUDY PURPOSE:
- This project was a component of a semi-annual psychographic and behavioral study of Washington area residents.
- The purpose of this study was to determine Washington area residents’ behaviors and attitudes toward transportation, in particular toward the private car, Metrobus, and Metrorail.

RESEARCH OBJECTIVES:
- Determine the size and characteristics of current rider customer groups
- Identify how these customer groups are distinct from the regional population as a whole
- Determine the size and characteristics of the customer groups representing the greatest potential for conversion to transit from other modes of transportation
- Identify the service-related and/or attitudinal factors that inhibit increased use of transit by these groups
- Identify motivating positions and marketing strategies that would overcome factors inhibiting use or increased use of transit within individual market segments
- Determine the size and characteristics of the customer groups representing non-potential groups
- Identify the specific information needs of existing customers and potential customers
- Identify the most effective medium(a) for meeting those information needs to affect mode choice decisions
METHODOLOGY:

<table>
<thead>
<tr>
<th>Mode of Data Collection</th>
<th>Random Digit Dialing Telephone Survey</th>
</tr>
</thead>
<tbody>
<tr>
<td>Completed Surveys</td>
<td>503 Respondents Total:</td>
</tr>
<tr>
<td></td>
<td>– Private vehicle only – 274</td>
</tr>
<tr>
<td></td>
<td>– Mass transit – 206</td>
</tr>
<tr>
<td></td>
<td>– Ethnicity – 78% white</td>
</tr>
<tr>
<td>Survey Population</td>
<td>Residents of Arlington County and those who may live elsewhere but work in Arlington County</td>
</tr>
<tr>
<td></td>
<td>– Must be at least 18 years of age</td>
</tr>
<tr>
<td>Survey Instrument</td>
<td>Questionnaire and CATI Interviewing</td>
</tr>
</tbody>
</table>

KEY FINDINGS:

Private Car Usage:

♫ Use of the private car was quite prevalent in Arlington County.
  – The vast majority of all trips taken by Arlington residents were by private car (74%), with more than one-half being by private car occupied by the driver alone (55%).
♫ Private vehicle only users tended to be older and have a higher household income than did transit users. They also were more likely to be married and not employed full-time, than were mass transit users.
  – Mass transit users were significantly more likely to have a post-graduate or professional degree.
♫ Residents tended to be neutral in their opinions of the private car as a mode of transportation.
  – They did, however, show concern about cost, safety, parking, and other issues.

Metrorail:

♫ Use of Metrorail, particularly for commuting to and from work or school, was fairly strong among Arlington County residents – there is still room for growth, though.
  – Virtually every resident (97%) had used Metrorail at some point in the past.
  – More than half of Arlington County residents said that they are using Metrorail less often now than they did in the past.
♫ Metrorail users tended to be younger, single, employed full-time, and have a college degree, compared with non-users.
  – The household income, gender, and ethnicity of Metrorail riders were comparable to those of the general public.
♫ Arlington County residents had generally positive opinions of Metrorail as a mode of transportation – lifestyle, parking, and safety issues were factors impeding greater use.

Metrobus:

♫ Use of Metrobus appeared to be limited among Arlington County residents, although, almost three-quarters said they have used Metrobus at some point in the past.
  – Only 4% of Arlington County residents’ trips are typically made by Metrobus.
  – A large proportion of area residents said they use Metrobus less often than they did in the past - primarily because of a preference for the car or Metrorail.
  – Almost nine in ten residents said they live within four blocks of a bus stop.
Arlington County residents held less positive opinions of Metrobus as a mode of transportation – safety, convenience, comfort, available, and meeting transportation needs were areas of concern.

Other Issues:
- 73% of Arlington County residents were aware of SmarTrip – 30% were currently using it.
- About four in ten of those employed were aware that their employer offers Metrochek or SmartBenefits.
- When asked what sources they have used to plan trips, the large majority said they used maps or signage at Metrorail stations the most.
  - The Internet was the most popular information resource respondents would consider using as a potential option.
- More than two-thirds of respondents reacted favorably to the idea of video monitors on Metrobuses and Metrorail cars.
- More than one-third reacted favorably to the idea of animated advertising within the tunnels of the Metrorail system.
